i)
Avian
Flu

tested, based on protocol EN 14476 with Avian Flu surrogate virus H8N3.

ii) Virucidal tested, based on protocol EN 14476 except where stated differently.

iii) BVDV-Bovine Viral Diarrhoea Virus test acc. Acc. To DVV/RKI (surrogate for Influenza A)

* Expected to be effective against A1 based on formulation equivalence with products already tested

** Expected to be effective against A1 based on minimum level of active ingredient and WHO or local authority guidelines

The above table recommends products and usage conditions to achieve safe, clean and hygienic conditions in offices. These products are effective against Swine Flu. The last column provides (preliminary) recommendations for situations of acute contamination with Swine Flu virus, formally notified outbreaks, or in case you wish to apply virucidal dosages for extra security. The recommendations should be viewed as complementary to requirements issued by local health authorities. Products listed here are available in most countries across Europe. A list of recommended products in other regions can be provided on request. Further suitable products may be available locally.
